MVN-2011-01567-ETT

(225) 219-3003; Fax (225) 219-3156  
Project Manager  
Jamie Phillippe  
WQC Application Number  
WQC JP 110727-01

Interested parties are hereby notified that a permit application has been received by the New Orleans District of the U.S. Army Corps of Engineers (Corps) pursuant to: [X] Section 10 of the Rivers and Harbors Act of March 3, 1899 (30 Stat. 1151; 33 USC 403); and/or [X] Section 404 of the Clean Water Act (86 Stat. 816; 33 USC 1344).

Application has also been made to the Louisiana Department of Environmental Quality for a Water Quality Certification (WQC) in accordance with statutory authority contained in LRS30:2047 A(3), and provisions of Section 401 of the Clean Water Act (P.L.95-17).

## **EXPAND A COAL STORAGE FACILITY ON THE MISSISSIPPI RIVER IN PLAQUEMINES PARISH, LOUISIANA**

**NAME OF APPLICANT:** International Marine Terminals, c/o PPM Consultants, Attention: Tim Powers, 15556 Perkins Road, Baton Rouge, Louisiana 70810.

**LOCATION OF WORK:** Along the right descending bank of the Mississippi River at 57 miles above the "Head of Passes", within Sections 06, 07 & 08, Township 17 South, Range 25 East, Myrtle Grove, Plaquemines Parish, Louisiana.

**EXISTING CONDITIONS:** The facility was originally authorized by the Corps of Engineers, New Orleans District (CEMVN) permit # SE (Mississippi River) 1483. Subsequent Corps permits have authorized facility expansions and maintenance dredging. CEMVN issued a public notice (PN) dated August 1, 2011 (CEMVN file # MVN-2011-01567-ETT) for an application submitted by International Marine Terminals (IMT) proposing to expand/upgrade the facility to the south. A final decision on that application is pending. IMT is now requesting to expand/upgrade the facility to the north as well.

**CHARACTER OF WORK:** Clear, grade, excavate, and fill an upland parcel located on the protected side of the levee and abutting the north side of the existing coal storage facility. The proposed project would install a (pumped) drainage culvert over the levee to the river to serve a proposed upgraded storm water collection and treatment system. The project would excavate approximately 550 cubic yards of materials from the batture, to install the culvert resulting in  $\pm 0.06$  acre of temporary impacts to riverine

wetlands. The project would also dredge approximately 21,995 cubic yards of material<sup>4s</sup> from  $\pm 2.0$  acres of non-vegetated river bottoms along the project site shoreline in the area of the existing docks. IMT also proposes to remove existing barge fleeting mooring dolphins, improve the existing docks and construct two new barge unloading and cleaning docks. Other work, within the existing facility footprint, to upgrade and improve the storage yard and marine terminal is proposed but will not result in additional impacts to waters of the US. The project will temporarily impact  $\pm 2.0$  acres of non-vegetated river bottoms and  $\pm 0.06$  acre of riverine wetlands. If compensatory mitigation is required the applicant will use the appropriate Corps approved mitigation bank.

The comment period for the Department of the Army Permit and the Louisiana Department of Environmental Quality WQC will close **30 days** from the date of this joint public notice. Written comments, including suggestions for modifications or objections to the proposed work, stating reasons thereof, are being solicited from anyone having interest in this permit and/or this WQC request and must be mailed so as to be received before or by the last day of the comment period. Letters concerning the Corps of Engineers permit application must reference the applicant's name and the Permit Application Number, and be mailed to the Corps of Engineers at the address above, **ATTENTION: REGULATORY BRANCH**. Similar letters concerning the Water Quality Certification must reference the applicant's name and the WQC Application number and be mailed to the Louisiana Department of Environmental Quality at the address above. The application for this proposed project is on file with the Louisiana Department of Environmental Quality and may be examined during weekdays between 8:00 a.m. and 5:00 p.m. Copies may be obtained upon payment of costs of reproduction

The applicant has certified that the proposed activity described in the application complies with and will be conducted in a manner that is consistent with the Louisiana Coastal Resources Program. The Department of the Army permit will not be issued unless the applicant receives approval or a waiver of the Coastal Use Permit by the Department of Natural Resources.

### **Corps of Engineers Permit Criteria**

The decision whether to issue a permit will be based on an evaluation of the probable impacts, including cumulative impacts of the proposed activity on the public interest. That decision will reflect the national concern for both protection and utilization of important resources. The benefit which reasonably may be expected to accrue from the proposal must be balanced against its reasonably foreseeable detriments. All factors which may be relevant to the proposal will be considered including the cumulative effects thereof; among those are conservation, economics, aesthetics, general environmental concerns, wetlands, historic properties, fish and wildlife values, flood hazards, floodplain values, land use, navigation, shoreline erosion and accretion, recreation, water supply and conservation, water quality, energy needs, safety, food and fiber production, mineral needs, considerations of property ownership and, in general, the needs and welfare of the people.

The U.S. Army Corps of Engineers is soliciting comments from the public, federal, state, and local agencies and officials, Indian Tribes, and other interested parties in order to consider and evaluate the impacts of this proposed activity. Any comments received will be considered by the U.S. Army Corps of Engineers to determine whether to make, modify, condition, or deny a permit for this proposal. To make this decision, comments are used to assess impacts on endangered species, historic properties, water

quality, general environmental effects, and other public interest factors listed above. Comments are used in the preparation of an Environmental Assessment and/or an Environmental Impact Statement pursuant to the National Environmental Policy Act. Comments are also used to determine the need for a public hearing and to determine the overall public interest of the proposed activity.

The Corps of Engineers is unaware of any properties listed on the National Register of Historic Places at or near the proposed work site. The possibility exists that the proposed work may damage or destroy presently unknown archeological, scientific, prehistorical, historical sites, or data. Copies of this notice are being sent to the State Archeologist and the State Historic Preservation Officer.

Our initial finding is that the proposed work would neither affect any species listed as endangered by the U.S. Departments of Interior or Commerce, nor affect any habitat designated as critical to the survival and recovery of any endangered species.

This notice initiates the Essential Fish Habitat (EFH) consultation requirements of the Magnuson-Stevens Fishery Conservation and Management Act. The applicant's proposal would result in the destruction or alteration of approximately  $\pm 2.06$  acres of EFH utilized by various life stages of red drum and penaeid shrimp. Our initial determination is that the proposed action would not have a substantial adverse impact on EFH or federally managed fisheries in the Gulf of Mexico. Our final determination relative to project impacts and the need for mitigation measures is subject to review by and coordination with the National Marine Fisheries Service.

If the proposed work involves deposits of dredged or fill material into navigable waters, the evaluation of the probable impacts will include the application of guidelines established by the Administrator of the Environmental Protection Agency. Also, a certification that the proposed activity will not violate applicable water quality standards will be required from the Louisiana Department of Environmental Quality, before a permit is issued.

Any person may request, in writing, within the comment period specified in this notice, that a public hearing be held to consider this application. Requests for public hearings shall state, with particularity, the reasons for holding a public hearing.

You are requested to communicate the information contained in this notice to any other parties whom you deem likely to have interest in the matter.

Michael V. Farabee  
Chief, Eastern Evaluation Section  
Regulatory Branch
