

## NOTES:

- 1. Material for drillsite expansion & ring levees will be hauled in from offsite.
- The drillsite and ring levees will be degraded within 90 days following abandonment.The material will be deposited to the extent practicable into the borrow areas from which the material was excavated and the area leveled and restored to as near preproject conditions as practicable.
- In the event the well is productive, boards may be replaced with gravel or other suitable
  permitizing material and the area restored except for the minimum area required for
  production.
- Closure procedures, including onsite land treatment and/or offsite disposal of mud pit contents and other drilling residues, shall be conducted in accordance with appropriate Federal and State Regulations.
- 5. Closed mud system will be used.

DISCLAIMER: At this time, Fenstermaker & Associates, Inc. has not performed nor was asked to perform any type of engineering, hydrological modeling, flood plain, or "No Rise" certification analyses, including but not limited to determining whether the project will impact flood hazards in connection with federal/FEMA, state, and/or local laws, ordinances and regulations. Accordingly, Fenstermaker makes no warranty or representation of any kind as to the foregoing issues, and persons or entities using this information shall do so at their own risk.
